

Information on marketability of fertilizers in Germany and EU

FiBL Projekte GmbH does not guarantee the correctness, completeness or timeliness of information in this fact sheet. Publication in the Input List for organic production in Germany does not provide any proof of the marketability of a product.

Background

Inclusion of a product in the "Betriebsmittelliste für die ökologische Produktion in Deutschland" (German Input List for organic production) or the "European Input List" requires the product to be marketable in an EU member state.

Companies which place products on the market are responsible for ensuring that they comply with the legal requirements regarding marketability. In Germany, compliance with the requirements for fertilizers, soil conditioners, plant aids and growing media is supervised by the official fertilizer market control authorities of the federal states. This fact sheet is intended to provide an overview of the possibilities for the legitimate marketing of fertilizers in order to support the companies applying for publication in the Input List. For further detailed information, please refer to the relevant regulations or websites of the responsible federal state authorities, for Germany e.g.:

- Bavarian State Research Center for Agriculture:
